Vocollect Speech Recognition Wired Headsets

Purpose-Built for Industrial Environments

In the world of distribution, where logistic improvements are measured in seconds, team members can't afford to miss hearing a single assignment or be burdened with repeating responses, resulting in delays. When every second counts, Vocollect™ speech recognition wired headsets provide the performance you need in the most demanding industrial environments.

Honeywell understands how to maximize the headset experience, because our speech recognition headsets are purpose-built for Vocollect voice-enabled applications in the warehouse and distribution center. In addition to the Vocollect SRX2 Bluetooth® Wireless Headset, we offer wired options that support the unique needs of freezer environments, high-noise environments and hard hat workers.

Headset styles include versions worn behind the head or over the top of the head to accommodate the worker's preference. With multiple options, you will find a Vocollect headset that meets your specific requirements.

FEATURES & BENEFITS

Honeywell speech recognition headsets are purpose-built for Vocollect voice-enabled applications, offering wired options that support the unique needs of freezer environments, high-noise environments and hard hat workers.

All Vocollect wired headsets are tested with 15 drops from 2.1 m (7 ft) at minimum and maximum operating temperatures, and 50 drops from 1.8 m (6 ft).

In the challenging freezer/cold storage environment, the design of the Vocollect wired headsets means they withstand extreme cold, and can be worn comfortably with protective clothing.

The Vocollect SR-15 Wired Headset is a lightweight, behind-the-head configuration for workers with special head coverings, hairstyles or hats (including hard hats).

All Vocollect speech recognition wired headsets have been optimized to work with Vocollect A500 and A720 mobile devices, with models that are purpose-built to operate in specific environments.

Vocollect SR-30 Headset

- Single earcup headset that provides noise reduction, making it ideal for high-noise environments.
- Specially designed microphone to compensate for the additional distance from the mouth that the earcup creates.
